MEMORANDUM FOR: Ad Hoc Requirements Committee Members

SUBJECT : Transmittal of Progress Report

1. The attached progress report on read-out of System Four collection has been submitted by Assistant Director/Scientific Intelligence of CIA for the information of Ad Hoc Requirements Committee members.
2. He anticipates that the ELINT data ensuing from Missions 4065 and 4069 will be essentially completed around 14 March and will be turned over to electronics specialists for intelligence assessment. It is believed that about two weeks might be required for this assessment.
3. A similar data processing for Missions 2037 and 4066 will be completed by about the middle of April and the intelligence appreciation about a week later. It is anticipated that data from 2037 will be more productive of intelligence value than 4066. It is not believed, at this time, that the general intelligence appreciation of System Four in peripheral applications will be significantly affected by the additional contributions from 2037 and 4066.
4. This report will be a subject of discussion at the next Ad Hoc Requirements Committee meeting.
